Hi Tim,

Can't say I've heard of anyone using BzO for KDT data in quite some time. Could definitely help where I can to help you resolve the issue if needed. Our developer is local.

In the interim, the attached, that we build for the long term capacity team may get you what you need.

Hey Chris!

Ted Meyers said you would be a good contact for this question. I'm working on the Agent Barney project. I'm trying to run a report based the KDT Universe in BzO but am encountering an issue. What I'm looking for is a list of what products are made on what plant / lines. The Production data looks promising, but when I try to add any product or production fields to the query, there is some sort of join error. I documented what I'm encountering below. Any ideas?

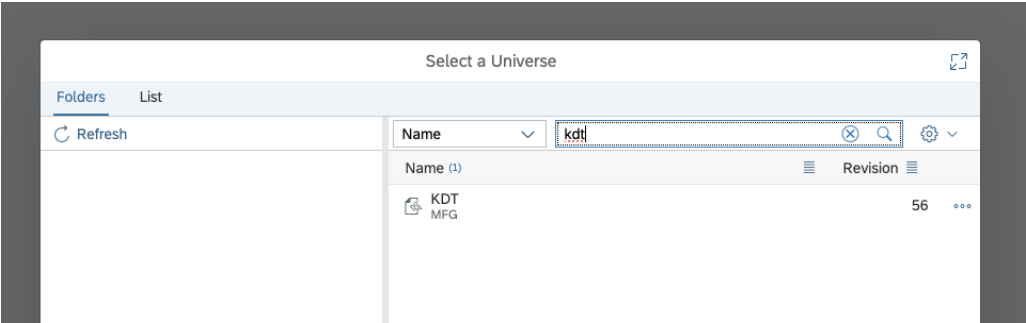

Thanks,
Tim

Subject: KDT production

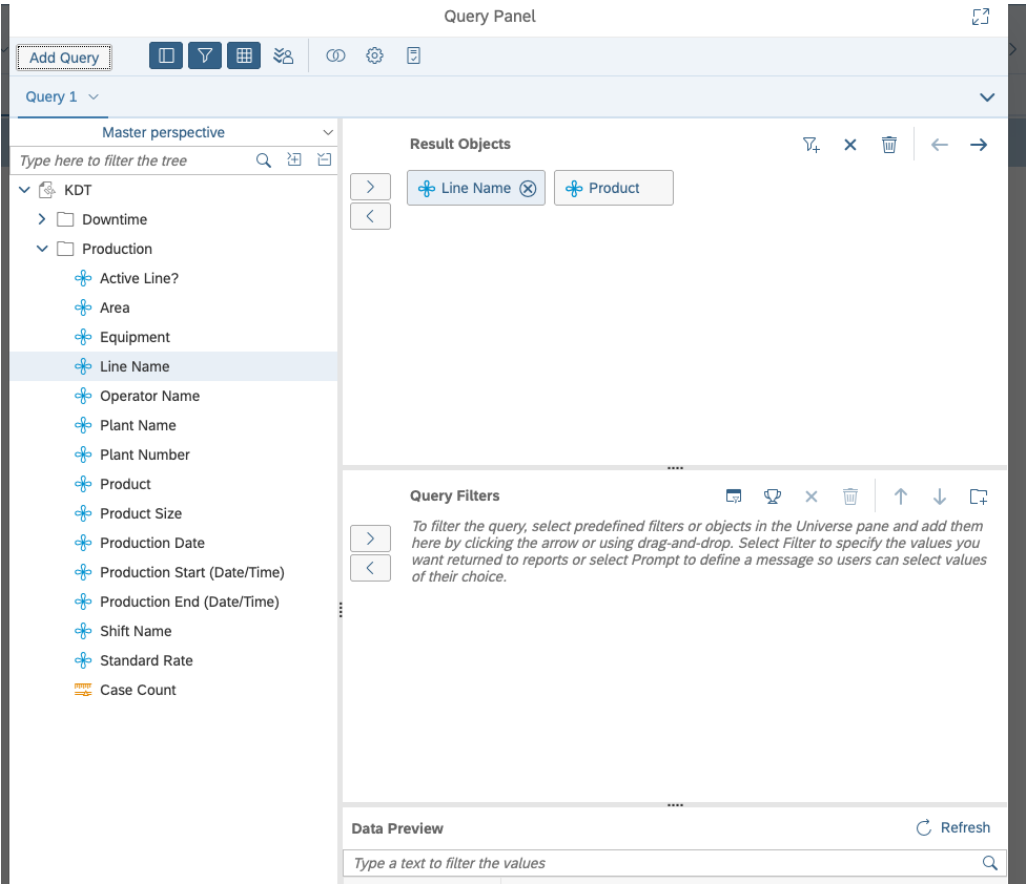

Hey Ted,

I'm experiencing a data issue in BzO. As part of our research into Kroger manufacturing capabilities, we are looking for data that explains what formulations are manufactured on which lines and with what equipment. Victor Jacobsen discovered or was pointed to the KDT Universe in BzO as a potential source. He forwarded to me, and I've been experimenting with some queries. I can build simple queries, but when I try to a product field, I get an error message. See below:

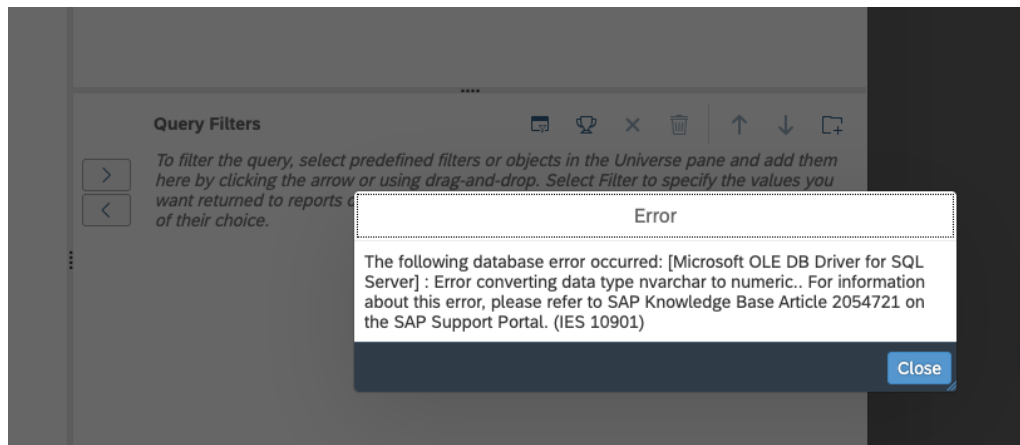

I'm building a query based on the KDT Universe.

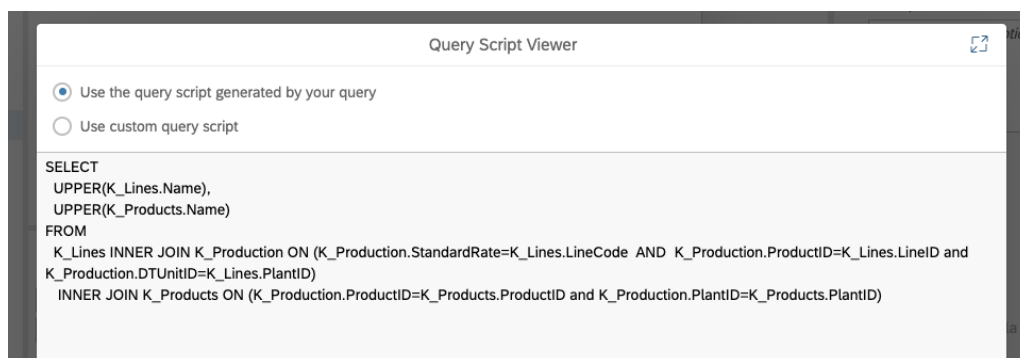

As a minimal example, add Line Name and Product to the report.

When I try to preview the data, I get this error:

After a little digging around, I think there is something wrong with the way the Universe is configured. Specifically, I suspect that one of the joins of the underlying tables is causing this “nvarchar to numeric” issue.

StandardRate to LineCode looks suspicious and sure enough StandardRate is a decimal type while LineCode is nvarchar.

	ShowLoginSelection	bit	FinishedCaseCount	decimal
e/Time)	LineCode	nvarchar	StandardRate	decimal
/Time)	RealtimeGroup	nvarchar	LastEditedBy	int
	DisclauOrder	int		

It might be that this dataset isn’t widely used or update since no one is apparently reporting this issue. Just curious if there is anyone who will no about this dataset and this issue.

Thanks,
Tim
